Product Announcement

Date: March 1, 2008

NetEx is pleased to announce a new version of NetEx/IP software for IBM z/OS operating systems for use with the Open Systems Adapter (OSA). This new software product is available, effective immediately.

The H210IPZ NetEx/IP software product provides the same functionality as H210IP, but no longer requires external NESiGate hardware for ESCON channel connectivity.

This new release provides the following:

H210IPZ   Release 7.0   H210IPZ for IBM zOS Operating Systems

This version of H210IPZ NetEx/IP for IBM mainframe environments is compatible with other supported NetEx/IP software. All applications that currently operate over H210IP are supported in the same manner.

For the purpose of assisting in a migration plan to an OSA deployment, H210IPZ also supports the NESiGate appliance as an ESCON channel gateway for communications to other NetEx/IP hosts in the customer's network.

A new license is required to operate H210IPZ NetEx/IP software with OSA connectivity.
