

## Product Announcement

Date: September 29th, 2008

NetEx is pleased to announce a new version of HyperIP Software release 5.5 which is available, effective immediately.

This new release allows for the following:

- **Multiple site configurations, supporting N to N sites. The current extent of the mesh configuration supported is 10 nodes x 10 nodes. If you have requirements that go beyond a 10 x 10 configuration, please contact NetEx marketing for more information.**
- **Increased number of TCP connections to 8,000 +.**
- **New command line interface (CLI) providing a single command response interface for new configuration commands.**
- **Multiple disk image upgrade mechanism for subsequent upgrades allowing customers to non-disruptively install new images while HyperIP is running and to control when the switchover takes place and a back down path if needed.**
- **Supports a new platform supporting enhanced performance up to 800 Mb/s for a single TCP connection.**

Please contact NetEx to learn about the upgrade kit for this release.
